

LISTING OF THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

1 (currently amended): An inorganic-organic hybrid film-coated stainless steel foil comprising a stainless steel foil substrate having coated on one surface or both surfaces thereof an inorganic-organic hybrid film, wherein said inorganic-organic hybrid film comprises a skeleton formed of an inorganic three-dimensional network structure mainly comprising a siloxane bond, with at least one crosslinked oxygen of said skeleton being replaced by an organic group and/or a hydrogen atom, and the ratio $[H]/[Si]$ between hydrogen concentration $[H]$ (mol/l) and silicon concentration $[Si]$ (mol/l) in said film satisfies the condition of $0.1 \leq [H]/[Si] \leq 10$;

wherein the thickness T_f of said inorganic-organic hybrid film satisfies the condition $0.5 \mu m \leq T_f \leq 2 \mu m$; and

wherein the thickness T_f of said inorganic-organic hybrid film and the thickness T_s of said stainless steel foil substrate satisfy the condition of $T_f \leq T_s/40$.

2 (original): The inorganic-organic hybrid film-coated stainless steel foil as claimed in claim 1, wherein said organic group is one or more member selected from an alkyl group, an aryl group, a hydroxyl group, a carboxyl group and an amino group.

3 (previously presented): The inorganic-organic hybrid film-coated stainless steel foil as claimed in claim 1, wherein the average roughness R_{af} of the surface of said inorganic-organic hybrid film satisfies the condition of $R_{af} \leq 0.02 \mu m$.

Claims 4 and 5: (canceled).

6 (previously presented): The inorganic-organic hybrid film-coated stainless steel foil as claimed in claim 1, wherein the thickness T_f of said inorganic-organic hybrid

film and the average roughness R_a of the surface of said stainless steel foil substrate satisfy the condition of $R_a \leq T_f/2$.

Claims 7 to 17: (canceled).
